Economic Indicator Correlation Matrix

Relationship Strength Between Key Economic Variables

	Composite_Risk_Score	Economic_Health_Index	GDP_Growth_Rate	Inflation_Rate	Interest_Rate	Unemployment_Rate
Composite_Risk_Score	1.00	-0.51	-0.05	0.53	0.49	0.53
Economic_Health_Index	-0.51	1.00	0.23	-0.54	-0.46	-0.41
GDP_Growth_Rate	-0.05	0.23	1.00	0.01	0.02	-0.11
Inflation_Rate	0.53	-0.54	0.01	1.00	0.71	0.12
Interest_Rate	0.49	-0.46	0.02	0.71	1.00	0.17
Unemployment_Rate	0.53	-0.41	-0.11	0.12	0.17	1.00

Key Positive Correlations

- **Inflation Rate ↔ Interest Rate = 0.71**
High Inflation → Central Bank increases Interest Rate
- **Risk Score ↔ Inflation Rate = 0.53**
Inflation increases → Economic Risk increases
- **Risk Score ↔ Unemployment Rate = 0.53**
Higher Unemployment → Higher Economic Risk

Key Negative Correlations

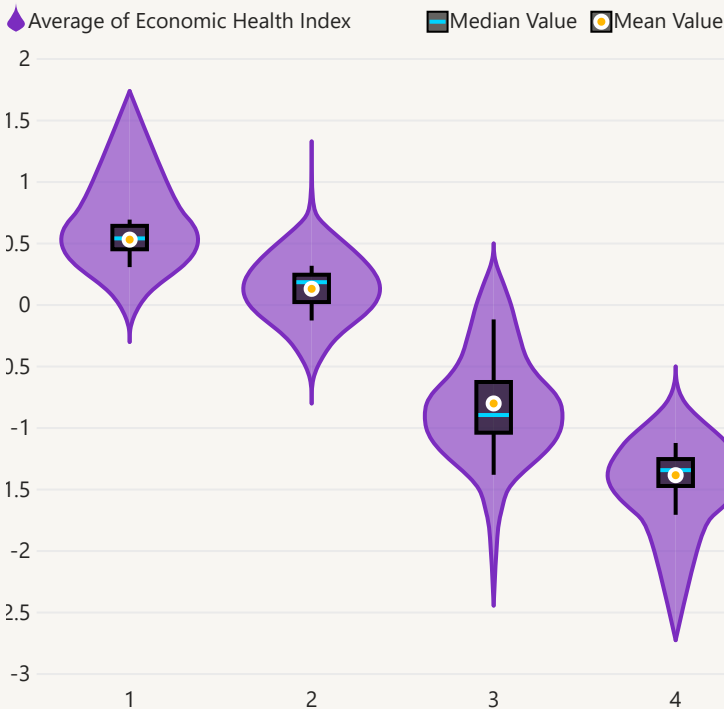

- **Economic Health ↔ Inflation = -0.54**
Inflation rises → Economic Health falls
- **Economic Health ↔ Risk Score = -0.51**
Economic Health improves → Risk decreases
- **Economic Health ↔ Interest Rate = -0.46**
Higher Interest Rates → Lower Economic Health

Reports & Insights

Executive Summary

The Economic Intelligence Dashboard analyzed 190,000+ economic observations across multiple countries and indicators.

The analysis identified inflation, unemployment, and interest rates as the most influential drivers of economic risk. Current economic conditions indicate a moderate risk environment, while forecasting models suggest a slight decline in future risk exposure over the next 12 months.

Key Statistical Findings

- Inflation Rate and Interest Rate showed the strongest positive correlation (0.71).
- Economic Health Index demonstrated a strong negative relationship with Risk Score (-0.51).
- Countries with higher unemployment levels consistently exhibited elevated economic risk.
- Economic Health Index distributions varied significantly across risk levels, confirming strong segmentation patterns.

Forecasting Insights

- Current Risk Score: 3.89
 - 12-Month Forecast Risk: 3.87
 - Forecast Gap: -0.02
 - Risk Outlook: Declining
- Forecast models indicate stable economic conditions with a marginal reduction in overall risk levels over the forecast horizon.

Machine Learning Insights

- Three distinct economic clusters were identified through machine learning segmentation.
- Cluster 2 emerged as the highest-risk economic segment.
- Middle East & Africa displayed the highest average risk within high-risk clusters.
- Recession-state economies exhibited the greatest concentration of economic vulnerability.
- High-risk countries represent only 11.29% of the total population analyzed.

Strategic Recommendations

1. Strengthen inflation-control policies to reduce future risk exposure.
2. Prioritize monitoring of Cluster 2 economies and recession-prone regions.
3. Improve employment generation initiatives to lower unemployment-driven risk.
4. Maintain balanced monetary policy to stabilize interest-rate volatility.
5. Continue monitoring forecast indicators for early detection of economic stress.
